1. What does the STYLE option do in an ODS statement?

2. We discussed several of the graphing procedures in SAS. If I wanted to make a bar chart, what PROC will be used?

3. In an iterative DO loop, when an increment is positive, ______________ must be the lower bound and ______________ must be the upper bound for the loop.

4. In a DO WHILE, the value of the expression is evaluated at the ______________ of the loop.

5. In a DO UNTIL, the value of the expression is evaluated at the ______________ of the loop.

6. What does the MPRINT option do?

7. What are the two most commonly used automatic macro variables?

8. State two (out of the six given in class) of the options of the PROC TTEST statement, and briefly (briefly!) explain what they do.
9. What is run-group processing (run-group processing is related to why we sometimes need a QUIT statement)?

10. In PROC TTEST, what is the name of the unpooled t-test?

11. What option in PROC TTEST will allow you to do a paired (dependent sample) t-test?

12. What is the difference between concatenating and appending?
