1. What procedures can be used to detect invalid data (list all four)?

2. Briefly describe each of the four methods (include options and such).

3. What happens when SAS encounters a data error?

4. What does NLEVELS option do within PROC FREQ?

5. What are the three methods of cleaning invalid data?

6. What are SAS date functions used for? (Not the date constant). Give an example of one and define it.
