1. You will need to read in a dataset called customerlist.csv located in S:\Courses\starenas\stat426\data1 folder. Call the dataset work.newcustomers.

2. You will need to write an INFORMAT statement when reading in this data because it contains a date.

3. Write a LABEL statement for the labels for the report (to take out underscores and such) to make them nicer to read.

4. Write a FORMAT statement to format the date variable back into a readable form (not the SAS date value).
