**Contribution:** Briefly describe what your feature(s) is/are:

___________________________________________________________________
___________________________________________________________________

Walk me through your Gantt chart. How long did this take? How long did you estimate it would take? What did you learn about your skill as an estimator?

Run your game and point out places where your code is called and run. (I will cycle through asking you this question and the next one until you either run out of interesting things to talk about or it is clear that you have made an above average contribution.)

Show the C++/C# code that was run. Walk me through the methods called from the time it enters your section of code.

**Technical:**
Walk me through your test plan. What are you testing? Why did you choose these tests?

Pick aPrefab you have created that is documented well in a separate readme file. (I will point to several places in your code documentation and ask) What question were you trying to answer here? Who do you anticipate would be asking that question? What other questions might this person need the answers to?

Prefab Name: _____________________________________________________

Show me a class in your code where there could be either static or dynamic binding. Write some mock code on this paper showing how you would set the static type and dynamic type of a variable.

Super Class: _____________________________________________________
Sub Class: _____________________________________________________
Virtual Function: ________________________________________________

Choose a dynamically bound method. What method gets called now?
Change the dynamic type. What method gets called now?
Pick a statically bound method. Which one would be called in each of the two previous cases?
Show me an example of reuse in your code where you violate copyright law. How does it violate copyright? What did you have to do to integrate it with the code you wrote? What are the legal implications if you market your code with the re-used portion? Use fair use argue that you can use this anyway.

4. Two well-chosen patterns.
Which patterns did you choose?
1. 
2.
Why did you choose each pattern? (Justify your use of it).

Pick the pattern that you know best:
Draw the class diagram for it.

Would something else have worked as well or better than this pattern? When would be a bad time to use this pattern?
