

Review problems

Modules 1-6

Stat 251

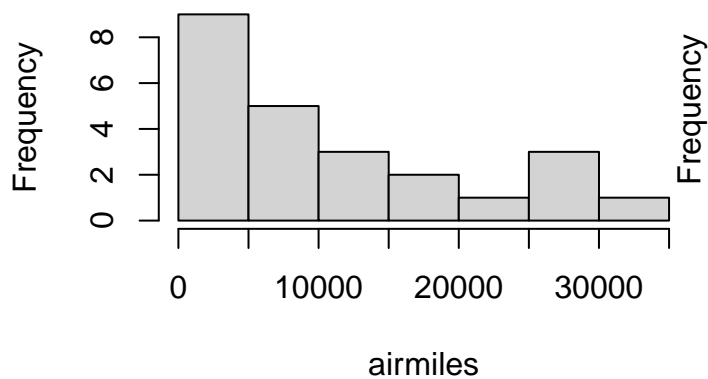

updated 2021

- (1) Describe the distributions of the following histograms (include shape (symmetric, etc.) and modality (unimodal, bimodal, etc.):
- (a) Nile River flow
 - (b) Old Faithful eruption duration
 - (c) Passenger air miles flown
 - (d) CO_2 levels

Histogram of Nile

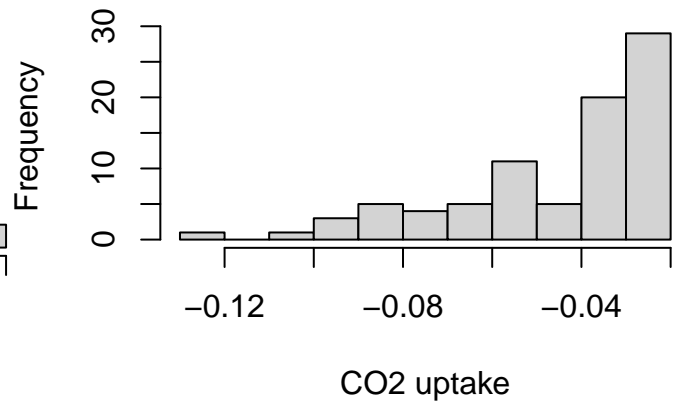

Histogram of airmiles

Histogram of eruptions

Histogram of CO2

- (2) Use the Empirical Rule to describe the distribution of the Nile River flows. The mean flow of the Nile is 919.35 and standard deviation is 169.23 (in $10^8 m^3$).

- (3) Suppose we have the following 7 Ozone measurements from New York, NY (1973). The units of measurement is in ppb (parts per billion). $\text{ozone}=\{41,36,12,18,28,23,19\}$. Calculate the following:
- Mean
 - Variance
 - Standard deviation
 - Looking at the boxplot, determine if there are any outliers.

```
boxplot(oz, horizontal=T,main='Ozone Readings NYC, NY 1973')
```

Ozone Readings NYC, NY 1973

- (4) A city council has requested a household survey be conducted in a suburban area of their city. The area is broken into many distinct and unique neighborhoods, some including large homes, some with only apartments, and others a diverse mixture of housing structures. Identify the sampling methods described below, and comment on whether or not you think they would be effective in this setting.
- Randomly sample 50 households from the city.
 - Divide the city into neighborhoods, and randomly sample 20 households from each neighborhood.
 - Divide the city into neighborhoods, randomly sample 10 neighborhoods, and sample all households from those neighborhoods.
 - Divide the city into neighborhoods, randomly sample 10 neighborhoods, and then randomly sample 20 households from those neighborhoods.
 - Sample the 200 households closest to the city council offices.
- (5) A study is designed to test the effect of light level on exam performance of students. The researcher believes that light levels might have different effects on males and females, so wants to make sure both are equally represented in each treatment. The treatments are fluorescent overhead lighting, yellow overhead lighting, no overhead lighting (only desk lamps).
- What is the response variable?
 - What is the explanatory variable? What are its levels?
 - What is the blocking variable? What are its levels?
- (6) You would like to conduct an experiment in class to see if your classmates prefer the taste of regular Coke or Diet Coke. Briefly outline a design for this study.
- (7) Real estate ads suggest that 64% of homes for sale have garages, 21% have swimming pools, and 17% have both. Find the following probabilities:
- No garage
 - No pool
 - Pool or garage
 - Pool but no garage
 - Neither a pool nor a garage
 - Are having a pool and a garage independent? Show work
 - Are having a pool and a garage mutually exclusive (disjoint)? Explain

- (8) A metal fabricating plant currently has five major pieces under contract, each with a deadline for completion. Let X be the number of pieces completed by their deadlines. Using the following pmf (probability mass function - the table given) to find:
- What is the probability of 5 pieces completed by deadline?
 - What is the probability that at least 3 are completed by deadline?
 - What is the probability that no more than 3 are completed by deadline?
 - Calculate EX , VX , and SDX

X	0	1	2	3	4	5
$p(x)$	0.05	0.10	0.15	0.25	0.35	

- (9) A 2010 Pew Research poll asked 1,306 Americans “From what you’ve read and heard, is there solid evidence that the average temperature on earth has been getting warmer over the past few decades, or not?”. The table below shows the distribution of responses by party and ideology, with relative frequencies.
- Are believing that the earth is warming and being a liberal Democrat mutually exclusive?
 - What is the probability that a randomly chosen respondent believes the earth is warming or is a liberal Democrat?
 - Does it appear that whether or not a respondent believes the earth is warming is independent of their party and ideology? Show work
 - Are Party and Belief , mutually exclusive (disjoint)?

Party/ideology	Yes	No	Don't know/ refuse	Total
Conservative republican	0.11	0.20	0.02	0.33
Mod/Lib republican	0.06	0.06	0.01	0.13
Mod/Cons democrat	0.25	0.07	0.02	0.34
Liberal democrat	0.18	0.01	0.01	0.20
Total	0.60	0.34	0.06	1

- (10) Dr. Peter Venkman wanted to do a test on ESP. He randomly selected his volunteers and they were shown one card of 4 different ones, one card at a time (blank side facing the subject) and were told to guess what shape they thought was on the back side of the card. The test was done for a total of 10 cards per subject.
- What is the name of the probability distribution for this? What are the parameter(s) of this distribution?
 - What is the probability that a random subject can get exactly one card correct?
 - What is the probability that they will get at least 8 cards correct?
 - Suppose that a subject actually has some ESP. Change the probability of success p to 0.5. Now calculate the probability of getting exactly 6 cards correct.
 - Calculate EX , VX , and SDX , using both probabilities of success (0.25 and 0.5 so there will be 2 sets of answers)
- (11) The number of calls coming per minute into a hotels reservation center is Poisson random variable with mean 3.
- Find the probability that no calls come in a given 1 minute period.
 - What is the probability that at least 1 call comes in a given 1 minute period?
 - Calculate EX , VX , and SDX
- (12) Find the probability of the following z-scores:

- (a) $P(Z < 1.89)$
 - (b) $P(Z > -0.5)$
 - (c) Find the z-score that represents the top 9%
 - (d) $P(-1 < Z < 0.87)$
 - (e) $P(Z < -7.17)$
- (13) Suppose the diameter at breast height (in.) of maple trees is normally distributed with mean 8.8 and standard deviation 2.8.
- (a) What is the probability that the diameter of a randomly selected tree will be at least 10 in.?
 - (b) What is the probability that the diameter of a randomly selected tree will exceed 20 in.?
 - (c) What is the probability that the diameter of a randomly selected tree will be between 5 and 10 in.?
 - (d) What is the probability that the diameter of a randomly selected tree will be less than 6 in.?
 - (e) How wide are the widest 2% of trees?
